Why are you here?:

If you're not a linguist per se, list other courses you've taken in linguistics:

Last book you read for fun:

Last movie you saw:

What is a **binomial distribution**?

What is a **variable rule**?

With a normal die, what are your chances of rolling a six three times in a row?

I have a hat with three cards in it, one red on both sides, one white on both sides, and one red on one side and white on the other. If I pull a card out and you see that it has one red side (but you don't see the other side), what are the chances that it is the red-red card?
